

HOT GLOVE

DESCRIPTION

The "Hot Glove" is made from a duplex knitted structure to give a glove within a glove. The inner glove controls the fit and comfort and is made of 100% cotton, whilst the outer glove absorbs the heat. The outer glove is made of 90% nomex and 10% Kevlar. The 14 inch glove can withstand handling temperatures of up to 350°C for under 15 seconds. It is made with Kevlar for cut resistance and has a criss-cross silica pattern for grip on the front and back.

RECOMMENDATION

- Handling smaller objects such as hot pan lids or trying to manoeuvre hot plates or bowls.
- Household uses: Turning Skewers on BBQs, hand protection from hot charcoal.
